### **DETAILED ACTION**

1. Applicant's election of Specie I (figures 1-3, claims 1-12) in the reply filed on 03/14/06 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over APA (figure 4) in view of Matsumoto (GB 2,265,760, submitted by applicant).

Regarding claims 1-12, PAP, figure 4 discloses a meter unit having a housing and an indicative portion (claims 5-12), a printed circuit board formed within the housing, the printed board having a plurality of components, a wiring pattern, regulator, and a high frequency circuit (CPU or IC), see figure 4.

APA does not disclose the printed circuit board comprising an electrical conductive membrane formed on an insulative membrane and connected to a ground pattern through a connection hole pattern.

Matsumoto shows an electromagnetically shielding printed circuit board as shown in figure 1 comprising a circuit board (1) having a ground layer (9) formed on an insulative layer (8) and connected to a ground pattern (4) on the through hole, see figure 1.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have a teaching of Matsumoto employed in the APA (figure 4) in order to reduce a noise of the component formed on the circuit board.

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Inoguchi, Kumazawa et al., and Ribak disclose related art.
